

DIEGO BELTRAN

📍 Chetumal, Quintana Roo, MX · 8123110123@utchetumal.edu.mx · +52 983 157 2802 · LinkedIn · GitHub

Professional Summary

Software development student focused on backend architecture, SPA design, and database optimization. Track record of delivering secure web applications and automating workflows using AI engineering tools. Recognized for resolving complex technical problems and contributing scalable solutions in corporate environments.

Education

Universidad Tecnológica de Chetumal

GPA: 9.7/10

Associate Degree in Software Development (Jun 2025) & B.S. in Software Engineering (Expected Dec 2026)

Languages: Spanish (Native), English (B2 Upper-Intermediate)

Professional Experience

Full Stack Developer

Asesores Gubernamentales Digitales Tech

Jan 2026 – Present

- Designed a Role-Based Access Control (RBAC) engine for a system migration to an SPA (Laravel 12 / Vue 3 / PrimeVue), securing over 100 endpoints by implementing transactional bulk inserts.
- Automated CRUD modules and dynamic field propagation within the Census registry module, reducing development time by 67% and multi-service processing by 75% through the design of 2 custom Agent Skills in Cursor.
- Resolved +30 critical tickets and technical debt across 2 corporate projects, debugging backend logic (Laravel/CodeIgniter) and frontend states (Vue 2/Vue 3) under containerized environments with Docker.

Computer Vision Research Assistant

ECOSUR

Apr 2025 – Jul 2025

- Developed an object-oriented Python library leveraging OpenCV and NumPy for geometric calculation and area estimation with 99% precision in environmental monitoring imagery.
- Refactored a 2,000+ line linear script into 6 modular, reusable classes, drastically reducing code redundancy and streamlining adoption for other researchers at the center.
- Designed calibration systems based on ArUco markers to standardize data capture under variable lighting conditions, processing critical samples for ongoing Ph.D. dissertations.

Backend Developer & DevOps (Sojal System)

UT Chetumal

Apr 2024 – Apr 2025

- Designed the architecture of 7 interconnected CRUD modules for route management, vehicle logs, and university waste management utilizing Laravel under the MVC design pattern.
- Migrated geospatial and routing data storage to MongoDB, reducing the original relational schema complexity by 40% and accelerating trajectory assignment queries.
- Configured system deployment on an Apache-managed Ubuntu server, setting up automated Bash scripts for basic availability monitoring and error log tracking.

Honors & Awards

1st Place – Highest Generation GPA (9.7/10.0)

Jan 2026

Awarded first place across the entire software development cohort for sustained academic excellence.

1st Place – Best Internship Project Competition

Aug 2025

Recognized among 40+ students for technical excellence in software research and full-stack development.

Technical Skills

Languages: Python, PHP, JavaScript, SQL, HTML/CSS

Frameworks & Tools: Laravel, Vue.js, Inertia.js, React, PrimeVue, Bootstrap, Git, Linux, Cursor (AI Coding), Docker

Databases: MongoDB, MySQL, PostgreSQL

Computer Vision & Data: OpenCV, NumPy, Pandas, Matplotlib, cv2.aruco
